Experience

December 2020 - April 2023

Adyptation, Springboro, OH – *Senior Software Engineer*

- Architected solutions for the product roadmap and created Confluence documentation for epics and user stories.
- Scoped, assigned and implemented tickets for a cross-platform React Native application.
- Created multiple JavaScript npm packages for code reuse, including Web UI components, utility functions, and API hooks for React.
- Improved code quality by introducing code/component style guides and expanding QA processes to include unit testing and code scanning (Jest/Husky/SonarCloud).
- Contributed to DevOps workflows using GitHub Actions and Fastlane.

June 2019 - November 2020

Vaultz Inc, New Albany, OH – *Software Developer*

- Maintained existing mobile application. Reduced crash rate from 80% to less than 2% by improving code quality and performance optimizations.
- Built 3 new front-end web products using React and Redux.
- Developed a Node.js-based microservice for handling invoicing for the customer base.
- Created automated build and deployment pipelines with Fastlane.

September 2018 - June 2019

Caresource Health Care Management, Dayton, OH – *Mobile Application Developer*

- Built reusable components and libraries for multiple company mobile applications using Java, Swift, and React Native.
- Led the development of a Biometric Authentication feature for the enterprise application.
- Mentored other developers on unit testing, feature implementation, and building reusable libraries.
- Contributed to feature implementation ideas and worked with the Tech BA to outline story acceptance criteria.
